

IN THE SPECIFICATION:

Please replace paragraph 0007 of the specification with the following paragraph:

[0007] Each of the prices zones may be a discrete price. In addition, the financial product may be a futures or options contract. The method may further comprise selecting at least one price zone from the price zones, displaying a graph of prices versus time, and drawing a price line on the graph corresponding to the selected price zone. The step of displaying corresponding volumes for the price zones may further comprise determining volumes over the second time span. Determining the second time span may further comprise the steps of selecting a time unit count, so the second time span may include the selected time unit and a number of time units, equal to the time unit count, before the selected time unit. Displaying the trade data may further comprise displaying for each one of the time units at least one volume corresponding to at least one of a plurality of trader groups. Displaying the price zones may further comprise displaying, for each one of the price zones, at least one volume corresponding to at least one trader group. Furthermore, displaying trade data may further comprise displaying a composite implied volatility, a modified composite implied volatility, an in-the-money pain strike price, an out-of-the-money pain strike price, an in-the-money pain open interest, out-of-the-money pain open interest.

A marked-up copy showing the typographical correction highlighted in the office action is provided below:

[0007] Each of the prices zones may be a discrete price. In addition, the financial product may be a futures or options contract. The method may further comprise selecting at least one price zone from the price zones, displaying a graph of prices versus time, and drawing a price line on the graph corresponding to the selected price zone. The step of displaying corresponding volumes for the price zones may further comprise determining volumes over the second time span. Determining the second time span may further comprise the steps of selecting a time unit count, so the second time span may include the

selected time unit and a number of time units, equal to the time unit count, before the selected time unit. Displaying the trade data may further comprise displaying for each one of the time units at least one volume corresponding to at least one of a plurality of trader groups. Displaying the price zones may further comprise displaying, for each one of the price zones, at least one volume corresponding to at least one trader group.

Furthermore, displaying trade data may further comprise displaying a composite implied volatility, a modified composite implied volatility, an in-the-money pain strike price, an out-of-the-money pain strike price, an in-the-money pain open interest, out-of-the-money pain[[t]] open interest.
